MANYETİK PLAKA

• Manyetik plakalar, yüksek güçlü NdFeB mıknatıslarla (Br: 14.400–14.800 Gauss) üretilerek konveyör hatlarındaki demir ve ferromanyetik parçaları yakalar. Hat üzerine asılarak veya bant sonunda ürünle temas edecek şekilde uygulanabilir. Mikron boyutundaki metal parçacıkların üründe kalma riskini azaltır ve ihtiyaca göre özel ölçülerde üretilebilir.

MAGNETIC PLATE

• Magnetic plates are manufactured with high-strength NdFeB magnets (Br: 14,400–14,800 Gauss) to capture iron and ferromagnetic particles on conveyor lines. They can be suspended above the line or installed at the end of the conveyor so that the product comes into direct contact with the plate. They reduce the risk of micron-sized metal particles remaining in the product and can be manufactured in custom sizes to meet application requirements.
